Comments

delayed PPH, initiated quick OR after recognizing hemodynamically unstable and started initial resuscitation. Performed D+C with Dr [Redacted]
 Abdo pain and hematuria in woman with foley post op after CS complicated by bladder injury. Initiated workup and liased with radiology about imaging suspected urinary tract injuries
 SOB and abdo pain in PP patient. Did workup and plan to trend abnormal labs
 Excellent and appropriate assessment and management of patient with secondary PPH that became unstable. Identified all relevant clinical features and planned appropriate management.
 Liaised with relevant teams once differential Dx was established. Excellent management plan!
 Well thought out differential diagnosis and plan- thorough and timely care

Notes

Notes	Created By	Creation Date	Modified By	Modification Date
[Redacted] Needs one more assessment to complete. All EPAs at 4 or 5 with milestones achieved. No progress on part B since time of the last review (note entered - April 20, 2021). [Redacted]	[Redacted]	4/20/2021 9:04:22 AM		

EPA 7. URGENT GYNE CONSULT - Providing consultation and initial management for patients with urgent and emergent gynecologic presentations

Form	Completion	# of Forms	Breakdown	Status
RC - FORM 1	34%	1	0 0 0 1 0	In Progress

Milestone	Level of Supervision/Entrustment
Communicator 1.6 Assess a patient's decision-making capacity	Not Observed - 0 , In Progress - 0 , Achieved - 1

Collated comments from all forms collected

Comments
 Keen learner. Asked relevant questions and had very good management planning
 [redacted] did perform the counselling independently.
 Comprehensive care planning
 Very good management. Thoughtful and perceptive of all the challenges this case brought.
 Excellent, at or above expectations
 [redacted] was able to recognize the relevant obstetric considerations for a patient with possible APLAS and reviewed pertinent patient and family history that could be associated with this diagnosis. She also outlined an approach to management that considered potential obstetric complications. I discussed the role hematology could have in helping to review the potential diagnosis and discussing the role of anticoagulation so that we could arrange appropriate consultation and how that could also influence the final care plan for this patient.
 [redacted] was able to identify the pertinent issues related to the antenatal diagnosis of an omphalocele, including the relevant consultations that would be required and knowledge regarding ongoing management considerations. I provided some additional teaching related to criteria that are used to determine mode of delivery

Notes	Created By	Creation Date	Modified By	Modification Date
Still requires 3 additional assessment of achievement, at least one of which should include a genetic disorder to meet contextual requirements. (Note added April 20, 2021).	[redacted]	4/20/2021 9:17:16 AM	[redacted]	
[redacted] has achieved the overall number of assessments needed; however has not met the contextual requirements as there are no assessments related to a genetic disorder. This EPA remains incomplete as a result.	[redacted]	10/27/2021 1:46:46 PM	[redacted]
